3rd Workshop on reactive metals, MIT, Cambridge, Massachusetts USA March 2, 2007

## Outline

1. Overview of materials processing
2. Overview current work in GJK laboratory
3. Major findings of investigations
4. Research needs and future trends

3rd Workshop on reactive metals, MIT, Cambridge, Massachusetts USA March 2, 2007

## Overview of materials processing

- I. Value added utilization of materials
- II. Sustainability of processing
- III. Extensive utilization of materials
- IV. Development of new materials
- V. Estimation of thermodynamic data

Example: magnesium, aluminum

3rd Workshop on reactive metals, MIT, Cambridge, Massachusetts USA March 2, 2007

## Value added utilization of materials

- Processing magnesium or aluminum for parts utilizes only 50-55 % of the metal/alloy. The remaining is returned as scrap for remelting.
- Ingot metallurgy limits chemistry of alloy development

3rd Workshop on reactive metals, MIT, Cambridge, Massachusetts USA March 2, 2007

## Sustainability of processing

- Maximum utilization of energy-intensive produced materials
- Recycling of reactive metals
- Replacement of environment harmful steps in processing of reactive metals
- Sustainability of knowledge of processing for reactive metals

3rd Workshop on reactive metals, MIT, Cambridge, Massachusetts USA March 2, 2007

## Extensive utilization of materials

- Extend the life of utilization of materials
- Re-examine the ways we produce and utilize magnesium

3rd Workshop on reactive metals, MIT, Cambridge, Massachusetts USA March 2, 2007

## Estimation of thermodynamic data

- First principles calculation the best way
- Evaluation of the existing estimation techniques
- Development of new estimation techniques
- Couple estimation with calculating curve – fitting softwares

3rd Workshop on reactive metals, MIT, Cambridge, Massachusetts USA March 2, 2007

## Development of new materials

- For magnesium only 160 alloys were developed in the last 15 years
- Processing magnesium (HCP) remains a challenge

Aluminum has 1600 alloys to choose from for use

3rd Workshop on reactive metals, MIT, Cambridge, Massachusetts USA March 2, 2007

## Overview current work in GJK laboratory

- Magnesium processing and utilization**
- Powder metallurgy of magnesium
  - Coatings on magnesium
- Aluminum powder processing techniques such as forging**
- Copper-nickel alloys**
- Corrosion behaviour in sea water
  - Development of improved Cu-Ni alloys
- Electroless deposition in low temperature molten salts**

3rd Workshop on reactive metals, MIT, Cambridge, Massachusetts USA March 2, 2007

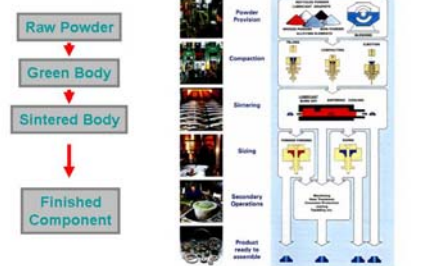

## Major findings of investigations

- Magnesium processing and utilization (Mr. Paul Burke will present the results)
- For aluminum research:
  1. Alloys were developed
  2. Chemistries altered
  3. Industry attracted
- P/M new processing powder forging consolidation

3rd Workshop on reactive metals, MIT, Cambridge, Massachusetts USA March 2, 2007

## What is Powder Metallurgy?

**Definition** - A process used to manufacture metallic components through the consolidation of metal powders.

3rd Workshop on reactive metals, MIT, Cambridge, Massachusetts USA March 2, 2007

## Powder consolidation projects

3rd Workshop on reactive metals, MIT, Cambridge, Massachusetts USA March 2, 2007

## Manufacturing process

In Microscopic scale

Metal powder

compression

sintering

1. 2. 3. 4.  
3rd Workshop on reactive metals, MIT, Cambridge, Massachusetts USA March 2, 2007

## New research

Semi-solid aluminum processing

1. Die-casting processing at the semi-solid state of aluminum alloys
2. Powder metallurgy – casting processing combination

3rd Workshop on reactive metals, MIT, Cambridge, Massachusetts USA March 2, 2007

## Coatings on magnesium

3rd Workshop on reactive metals, MIT, Cambridge, Massachusetts USA March 2, 2007

## BMW Composite Engine Block

3rd Workshop on reactive metals, MIT, Cambridge, Massachusetts USA March 2, 2007

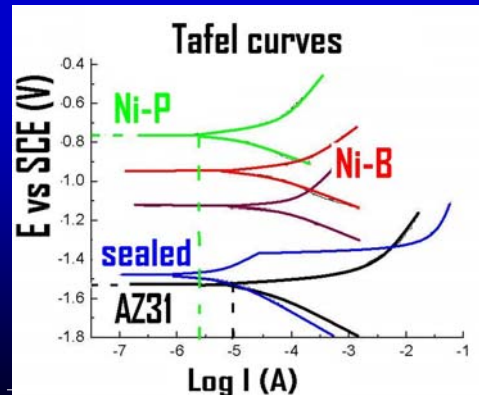

## Poor corrosion properties

- Formation of conversion coating to avoid Mg/Ni couple
- Seal coating in silicate solution (1<sup>ST</sup> step)

### ELECTROLESS Ni-B PLATING

- Plate on sealed conversion coating (2 step process)
- Plate on sealed Ni – P coating (3 step process)

3rd Workshop on reactive metals, MIT, Cambridge, Massachusetts USA March 2, 2007

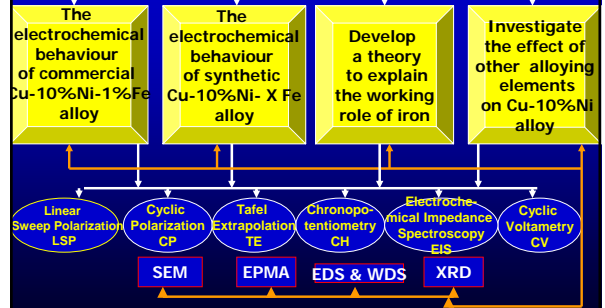

3rd Workshop on reactive metals, MIT, Cambridge, Massachusetts USA March 2, 2007

## Extensive utilization of materials

3rd Workshop on reactive metals, MIT, Cambridge, Massachusetts USA March 2, 2007

## Research Experimental Plan

### Targets

3rd Workshop on reactive metals, MIT, Cambridge, Massachusetts USA March 2, 2007

## Methodology

- Commercial Alloy**
  - Sample preparation (C96200)
    - \* Cutting
    - \* Polishing
  - Characterization by SEM, EDS, WDS and EPMA
  - Electrochemical measurements
  - Characterization by SEM, EPMA, EDS, WDS & XRD
- Synthetic Alloy**
  - Sample preparation in induction furnace
  - Sample homogenization/quenched by using tube furnace
  - Perform measurements, characterization as per commercial alloy

3rd Workshop on reactive metals, MIT, Cambridge, Massachusetts USA March 2, 2007

## Induction Furnace

3rd Workshop on reactive metals, MIT, Cambridge, Massachusetts USA March 2, 2007

## Linear Sweep Polarization of Synthetic Alloys with Different Iron Content in sea water

3rd Workshop on reactive metals, MIT, Cambridge, Massachusetts USA March 2, 2007

## Estimation of thermodynamic data

3rd Workshop on reactive metals, MIT, Cambridge, Massachusetts USA March 2, 2007

TABLE 1

Dehydration reactions

Reaction	Scheme	Reference
1 $\text{NdCl}_3 \cdot 6\text{H}_2\text{O} \rightarrow \text{NdCl}_3 \cdot 5\text{H}_2\text{O} + \text{H}_2\text{O}$	I	9
2 $\text{NdCl}_3 \cdot 6\text{H}_2\text{O} \rightarrow \text{NdCl}_3 \cdot 4\text{H}_2\text{O} + 2\text{H}_2\text{O}$	II	15
3 $\text{NdCl}_3 \cdot 6\text{H}_2\text{O} \rightarrow \text{NdCl}_3 \cdot 3\text{H}_2\text{O} + 3\text{H}_2\text{O}$	III	12, 13
4 $\text{NdCl}_3 \cdot 5\text{H}_2\text{O} \rightarrow \text{NdCl}_3 \cdot 4\text{H}_2\text{O} + \text{H}_2\text{O}$	I	9
5 $\text{NdCl}_3 \cdot 4\text{H}_2\text{O} \rightarrow \text{NdCl}_3 \cdot 3\text{H}_2\text{O} + \text{H}_2\text{O}$	II	15
6 $\text{NdCl}_3 \cdot 4\text{H}_2\text{O} \rightarrow \text{NdCl}_3 \cdot \text{H}_2\text{O} + 3\text{H}_2\text{O}$	I	9
7 $\text{NdCl}_3 \cdot 3\text{H}_2\text{O} \rightarrow \text{NdCl}_3 \cdot 2\text{H}_2\text{O} + \text{H}_2\text{O}$	II III	15 12, 13
8 $\text{NdCl}_3 \cdot 2\text{H}_2\text{O} \rightarrow \text{NdCl}_3 \cdot \text{H}_2\text{O} + \text{H}_2\text{O}$	II III	15 12, 13
9 $\text{NdCl}_3 \cdot \text{H}_2\text{O} \rightarrow \text{NdCl}_3 + \text{H}_2\text{O}$	I II III	9 15 12, 13

3rd Workshop on reactive metals, MIT, Cambridge, Massachusetts USA March 2, 2007

3rd Workshop on reactive metals, MIT, Cambridge, Massachusetts USA March 2, 2007

## Conclusions

- Production, processing and utilization of materials requires **sustainable** knowledge and **estimation** of data
- Also required is **combining processing** in a new way

3rd Workshop on reactive metals, MIT, Cambridge, Massachusetts USA March 2, 2007
